

## TEST YOUR CANNABIS-INFUSED COSMETICS WITH ACCUSCIENCE

The global CBD-infused cosmetic market is expected to increase and reach 3 billion dollars from 2020 to 2024 according to some market reports. Since the 2018 Farm Bill legalization of CBD at a federal level, an increasing number of cosmetics, lotion, and skincare products are being developed. Cannabidiol or CBD oil is one of over a hundred naturally occurring chemical compounds (known as “cannabinoids”) found in the cannabis plant. These cannabinoids exist in varying amounts in different parts and strains of the cannabis plant.

CBD's antioxidant and anti-inflammatory benefits offer the most potential to beauty products. CBD may enable these products to better improve the skin's appearance by reducing redness, smoothing and tightening skin, and promoting collagen production.

As such, you may see CBD appear as a listed ingredient in beauty and skincare products like:

- Body lotions, creams, and moisturizers
- Masks and facial products
- Lip balms and gloss
- Bath bombs
- Mascara and eyebrow gels
- Shampoo, conditioner, and hair products

AccuScience Laboratories test for safety and potency of CBD in the cosmetic and beauty products. We provide an ISO 17025 approved methodologies and certificate of analysis. The senior management at AccuScience Labs has a proven track record and over 100 years of combined analytical experience. We utilize the latest instrumentation, techniques and can support or collaborate with large-scale manufacturers to further contribute to the quality and consistency of the final product.
