

TEST YOUR CANNABIS-INFUSED EDIBLES WITH ACCUSCIENCE LABS

CANNABIS & HEMP-INFUSED EDIBLES ARE OFTEN NOT AS ADVERTISED

..... Studies have shown that the THC concentrations of cannabis-infused edibles are often not as advertised. This particularly poses a grave danger for consumers that use these for the medical benefits of the cannabinoids. Higher concentration of the THC may have serious side effects, while the lower concentration may be ineffective treatments.

The quality, safety and efficacy of cannabis-infused edibles have been challenging for both manufacturers and testing laboratories. In order to overcome these challenges and meet the quality, safety and efficacy requirements/regulations, manufacturers must rely on modern laboratories with robust methodologies, effective preparatory & advanced analytical technology utilizing state-of-the-art instrumentation. Additionally, manufacturers must have access to an accredited laboratory that is willing to provide the required R&D for their specific product and development. .
